Section 3.1 p.103

8) Sort list E, X, A, M, P, L, E using selection sort

First, find the smallest letter (in this case, A) and switch to the front

 $\to X \ \mathbf{A} \ M \ P \ L \ E \to \mathbf{A} \ X \ E \ M \ P \ L \ E$

A is now sorted. Exclude already sorted letters when finding the next smallest letter

 $X \mathrel{\mathbf{E}} M \mathrel{P} L \mathrel{E} \rightarrow \mathrel{\mathbf{E}} X \mathrel{M} \mathrel{P} L \mathrel{E}$

A and E are now sorted. Exclude sorted letters when finding next smallest letter

 $X \mathrel{\mathrm{M}} P \mathrel{\mathrm{L}} \mathbf{E} \to \mathbf{E} \mathrel{\mathrm{M}} P \mathrel{\mathrm{L}} X$

A, E, and E are now sorted. Exclude when finding next letter

 $M \mathrel{P} \mathbf{L} \mathrel{X} \to \mathbf{L} \mathrel{P} M \mathrel{X}$

A, E, E, and L are now sorted. Exclude when finding next letter

 $P \; \mathbf{M} \; X \to \mathbf{M} \; P \; X$

A, E, E, L, and M are now sorted. Exclude when finding next letter

$$\mathbf{P} \ \mathrm{X} \to \mathbf{P} \ \mathrm{X}$$

A, E, E, L, M, and P are now sorted. Exclude when finding next letter

$$\mathbf{X} \to \mathbf{X}$$

A, E, E, L, M, P, and X are all sorted. The resulting list is:

AEELMPX

11) Sort list E, X, A, M, P, L, E using bubble sort

 $\mathbf{E} \ \mathbf{X} \ \mathbf{A} \ \mathbf{M} \ \mathbf{P} \ \mathbf{L} \ \mathbf{E} \rightarrow \mathbf{E} \ \mathbf{X} \ \mathbf{A} \ \mathbf{M} \ \mathbf{P} \ \mathbf{L} \ \mathbf{E}$

 $\to \mathbf{X} \ \mathbf{A} \ \mathrm{M} \ \mathrm{P} \ \mathrm{L} \ \mathrm{E} \to \mathrm{E} \ \mathbf{A} \ \mathbf{X} \ \mathrm{M} \ \mathrm{P} \ \mathrm{L} \ \mathrm{E}$

 $E A \mathbf{X} \mathbf{M} P L E \rightarrow E A \mathbf{M} \mathbf{X} P L E$

 $E A M \mathbf{X} \mathbf{P} L E \rightarrow E A M \mathbf{P} \mathbf{X} L E$

 $E A M P \mathbf{X} \mathbf{L} E \to E A M P \mathbf{L} \mathbf{X} E$

 $E A M P L \mathbf{X} \mathbf{E} \to E A M P L \mathbf{E} \mathbf{X}$

X is in the correct position and does not need to be checked again.

 $\mathbf{E} \mathbf{A} \mathrm{M} \mathrm{P} \mathrm{L} \mathrm{E} \mathrm{X} \rightarrow \mathbf{A} \mathbf{E} \mathrm{M} \mathrm{P} \mathrm{L} \mathrm{E} \mathrm{X}$

 $A \ \mathbf{E} \ \mathbf{M} \ P \ L \ E \ X \rightarrow A \ \mathbf{E} \ \mathbf{M} \ P \ L \ E \ X$

 $A \to \mathbf{M} \ \mathbf{P} \ L \to X \to A \to \mathbf{M} \ \mathbf{P} \ L \to X$

 $A \to M \ \mathbf{P} \ \mathbf{L} \to A \to M \to \mathbf{L} \ \mathbf{P} \to X$

 $A \to M L \mathbf{P} \to X \to A \to M L \to \mathbf{P} X$

P is in the correct position and does not need to be checked again.

 $\mathbf{A} \ \mathbf{E} \ \mathrm{M} \ \mathrm{L} \ \mathrm{E} \ \mathrm{P} \ \mathrm{X} o \mathbf{A} \ \mathbf{E} \ \mathrm{M} \ \mathrm{L} \ \mathrm{E} \ \mathrm{P} \ \mathrm{X}$

 $A \mathbf{E} \mathbf{M} L E P X \rightarrow A \mathbf{E} \mathbf{M} L E P X$

 $A \to \mathbf{M} \ \mathbf{L} \to P \ X \to A \to \mathbf{L} \ \mathbf{M} \to P \ X$

 $A \to L \ \mathbf{M} \ \mathbf{E} \ P \ X \to A \to L \ \mathbf{E} \ \mathbf{M} \ P \ X$

M is in the correct position and does not need to be checked again.

 $\mathbf{A} \ \mathbf{E} \ \mathbf{L} \ \mathbf{E} \ \mathbf{M} \ \mathbf{P} \ \mathbf{X} \to \mathbf{A} \ \mathbf{E} \ \mathbf{L} \ \mathbf{E} \ \mathbf{M} \ \mathbf{P} \ \mathbf{X}$

 $A~\mathbf{E}~\mathbf{L}~E~M~P~X \to A~\mathbf{E}~\mathbf{L}~E~M~P~X$

 $A \to L \to M \to X \to A \to E \to L \to X$

L is in the correct position and does not need to be checked again.

 $\mathbf{A} \mathbf{E} \to \mathbf{L} \mathbf{M} \mathbf{P} \mathbf{X} \to \mathbf{A} \mathbf{E} \to \mathbf{L} \mathbf{M} \mathbf{P} \mathbf{X}$

 $A~\mathbf{E}~\mathbf{E}~L~M~P~X \rightarrow A~\mathbf{E}~\mathbf{E}~L~M~P~X$

All A, E, and E are in the correct position.

Section 3.4 p.120-121

```
1a) \Theta(n!)

Exhaustive-search: n * \frac{1}{2}(n-1)!

\frac{1}{2}n! \le 10,000,000,000 * t

n! \le 2 * 10,000,000,000 * t

1b.i) 1 hour = 3,600 seconds

n! \le 2 * 10,000,000,000 * 3,600

n! \le 72,000,000,000,000
```

 $16! \le 72,000,000,000,000$

The most that n can be in this equality is 16, therefore, the most cities that the problem can be solved in 1 hour is 16 cities.

```
1b.ii) 3,600 seconds * 24 = 86,400 seconds in 24 hours n! \le 2*10,000,000,000*86,400 n! \le 1,728,000,000,000,000 17! \le 1,728,000,000,000,000
```

The most that n can be in this equality is 17, therefore, the most cities that the problem can be solved in 24 hours is 17 cities.

```
1b.iii) 86,400 seconds * 365 = 31,536,000 seconds in a year n! \le 2 * 10,000,000,000 * 31,536,000 n! \le 630,720,000,000,000,000
```

 $19! \le 630,720,000,000,000,000$

The most that n can be in this equality is 19, therefore, the most cities that the problem can be solved in 1 year is 19 cities.

1b.iv) 31,536,000 seconds * 100 = 31,536,000,000 seconds in a century

$$n! \le 2 * 10,000,000,000 * 31,536,000,000$$

$$n! \le 630,720,000,000,000,000,000$$

$$21! \le 630,720,000,000,000,000,000$$

The most that n can be in this equality is 21, therefore, the most cities that the problem can be solved in 1 century is 21 cities.

9a)
$$\frac{64!}{56!} = 178,462,987,637,760 + \text{different positions}$$

Estimated Time of Completion:

$$\frac{178,462,987,637,760}{10,000,000,000}\approx17,846.299\;\mathrm{seconds}\approx4.957\;\mathrm{hours}$$

9b)

$$64 * 56 * 48 * 40 * 32 * 24 * 16 * 8 = 676, 457, 349, 120$$
 different positions

Estimated Time of Completion:

$$\frac{676,457,349,120}{10,000,000,000} \approx 67.646 \; \text{seconds} \approx 1.127 \; \text{minutes}$$

9c)

$$64 * 49 * 36 * 25 * 16 * 9 * 4 * 1 = 1,625,702,400$$
 different positions

Estimated Time of Completion:

$$\frac{1,625,702,400}{10,000,000,000}\approx 0.163 \; \mathrm{seconds}$$
